- 1. (ORIGINAL) A screening method for a prophylactic or therapeutic substance for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof, which comprises using said protein or a partial peptide thereof or a salt thereof.
- 2. (ORIGINAL) A screening method for a prophylactic or therapeutic substance for a disease associated with a protein comprising the amino acid sequence shown by SEQ ID NO:2 or a salt thereof, which comprises using said protein or a partial peptide thereof or a salt thereof.
- 3. (ORIGINAL) The screening method of claim 1, wherein the disease is diabetes or a renal disease.
- 4. (ORIGINAL) The screening method of claim 1, wherein the disease is diabetic nephropathy.
- 5. (ORIGINAL) The screening method of claim 1, which comprises cultivating a cell having an ability to produce a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a partial peptide thereof or a salt thereof in the presence and absence of a test substance, and comparing the amounts of said protein or a

partial peptide thereof or a salt thereof produced under the two conditions.

- 6. (ORIGINAL) A screening kit for a prophylactic or therapeutic substance for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof, which includes (a) a cell having an ability to produce said protein or a partial peptide thereof or a salt thereof, and (b) a substance selected from the group consisting of an antibody against said protein or a partial peptide thereof or a salt thereof, a polynucleotide to which said protein or a partial peptide thereof or a salt thereof can bind, and a transcription regulatory factor capable of interacting with said protein or a partial peptide thereof or a salt thereof.
- 7. (ORIGINAL) The screening method of claim 1, which comprises comparing the activities of a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a partial peptide thereof or a salt thereof in the presence and absence of a test substance.
- 8. (ORIGINAL) A screening kit for a prophylactic or therapeutic substance for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof, which

includes (a) said protein or a partial peptide thereof or a salt thereof, and (b) a polynucleotide to which said protein or a partial peptide thereof or a salt thereof can bind or a transcription regulatory factor capable of interacting with said protein or a partial peptide thereof or a salt thereof.

- 9 (ORIGINAL) The screening method of claim 7, which comprises cultivating a cell containing a gene whose expression is controlled by a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a partial peptide thereof or a salt thereof with said protein or a partial peptide thereof or a salt thereof in the presence and absence of a test substance, and comparing the expressions of said gene under the two conditions.
- 10. (ORIGINAL) A screening kit for a prophylactic or therapeutic substance for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof, which includes (a) a cell containing a gene whose expression is controlled by said protein or a partial peptide thereof or a salt thereof, (b) said protein or a partial peptide thereof or a salt thereof, and (c) a polynucleotide capable of hybridizing to said gene under highly stringent conditions.

- 11. (ORIGINAL) The screening method of claim 7, which comprises cultivating a cell having an ability to produce a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a partial peptide thereof or a salt thereof in the presence and absence of a test substance, and comparing the activities of said protein or a partial peptide thereof or a salt thereof under the two conditions.
- 12. (ORIGINAL) A screening kit for a prophylactic or therapeutic substance for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof, which includes (a) a cell having an ability to produce said protein or a partial peptide thereof or a salt thereof, and (b) a polynucleotide capable of hybridizing to a gene whose expression is controlled by said protein or a partial peptide thereof or a salt thereof under highly stringent conditions.
- 13. (ORIGINAL) A screening method for a prophylactic or therapeutic substance for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof, which comprises using a polynucleotide comprising the base sequence that encodes said protein or a partial peptide thereof.

- 14. (ORIGINAL) A screening method for a prophylactic or therapeutic substance for a disease associated with a protein comprising the amino acid sequence shown by SEQ ID NO:2 or a salt thereof, which comprises using a polynucleotide comprising the base sequence that encodes said protein or a partial peptide thereof.
- 15. (ORIGINAL) The screening method of claim 14, wherein the polynucleotide comprises the entire or a portion of the base sequence shown by SEQ ID NO:1.
- 16. (ORIGINAL) The screening method of claim 14, wherein the disease is diabetes or a renal disease.
- 17. (ORIGINAL) The screening method of claim 14, wherein the disease is diabetic nephropathy.
- 18. (ORIGINAL) The screening method of claim 14, which comprises cultivating a cell having an ability to produce a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a partial peptide thereof or a salt thereof in the presence and absence of a test substance, and comparing the amounts of mRNA that encodes said protein or a partial peptide thereof under the two conditions.

- 19. (ORIGINAL) A screening kit for a prophylactic or therapeutic substance for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof, which includes (a) a cell having an ability to produce said protein or a partial peptide thereof or a salt thereof, and (b) a polynucleotide capable of hybridizing to mRNA that encodes said protein or a partial peptide thereof under highly stringent conditions.
- 20. (Currently Amended) A prophylactic or therapeutic <u>method</u>

 agent for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof <u>in a mammal</u>, which <u>comprises</u> administering contains an antibody against said protein or a partial peptide thereof or a salt thereof <u>to said</u>

 <u>mammal</u>.
- 21. (Currently Amended) The prophylactic or therapeutic method agent of claim 20, wherein the disease is diabetes or a renal disease.
- 22. (Currently Amended) The prophylactic or therapeutic method agent of claim 20, wherein the disease is diabetic nephropathy.

- 23. (Currently Amended) A prophylactic or therapeutic <u>method</u>

 agent for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof <u>in a mammal</u>, which <u>comprises administering contains</u> a polynucleotide having a base sequence complementary to the base sequence that encodes said protein or a partial peptide thereof to said mammal.
- 24. (Currently Amended) The prophylactic or therapeutic <u>method</u> agent of claim 23, wherein the disease is diabetes or a renal disease.
- 25. (Currently Amended) The prophylactic or therapeutic <u>method</u> agent of claim 23, wherein the disease is diabetic nephropathy.
- 26. (Currently Amended) A diagnostic method reagent for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof in a mammal, which comprises using contains an antibody against said protein or a partial peptide thereof or a salt thereof.
- 27. (Currently Amended) The diagnostic method reagent of claim 26, wherein the disease is diabetes or a renal disease.

- 28. (Currently Amended) The diagnostic <u>method</u> reagent of claim 26, wherein the disease is diabetic nephropathy.
- 29. (Currently Amended) A diagnostic method reagent for a disease associated with a protein comprising the same or substantially the same amino acid sequence as the amino acid sequence shown by SEQ ID NO:2 or a salt thereof in a mammal, which comprises using contains a polynucleotide comprising the base sequence that encodes said protein or a partial peptide thereof.
- 30. (Currently Amended) The diagnostic <u>method</u> reagent of claim 29, wherein the disease is diabetes or a renal disease.
- 31. (Currently Amended) The diagnostic <u>method</u> reagent of claim 29, wherein the disease is diabetic nephropathy.
- 32. 33. (CANCELED)
- 34. (ORIGINAL) A prophylactic or therapeutic method for diabetes or a renal disease in a mammal, which comprises administering a TSC-22 suppressant to said mammal.
- 35. (ORIGINAL) The method of claim 34, wherein the renal disease is diabetic nephropathy.

36. - 37. (CANCELED)
